

Final Project Proposal – Team Git It

Our project is to create a website informing the public about the IMD Program. The site type is an informative website, our intended audience is students and people that are interested in applying for the program.

Our team will use facebook messenger to communicate our ideas for the project. GitHub will be used to keep track of tasks every week. Once a task is completed, we will update GitHub accordingly. We will meet every Tuesday after class to strengthen our bond and work on the project as a group.
